Experiment 10: Online Fashion Shopping System

Aim

To build a fashion catalogue with category filtering and a basic shopping cart total.

Algorithm

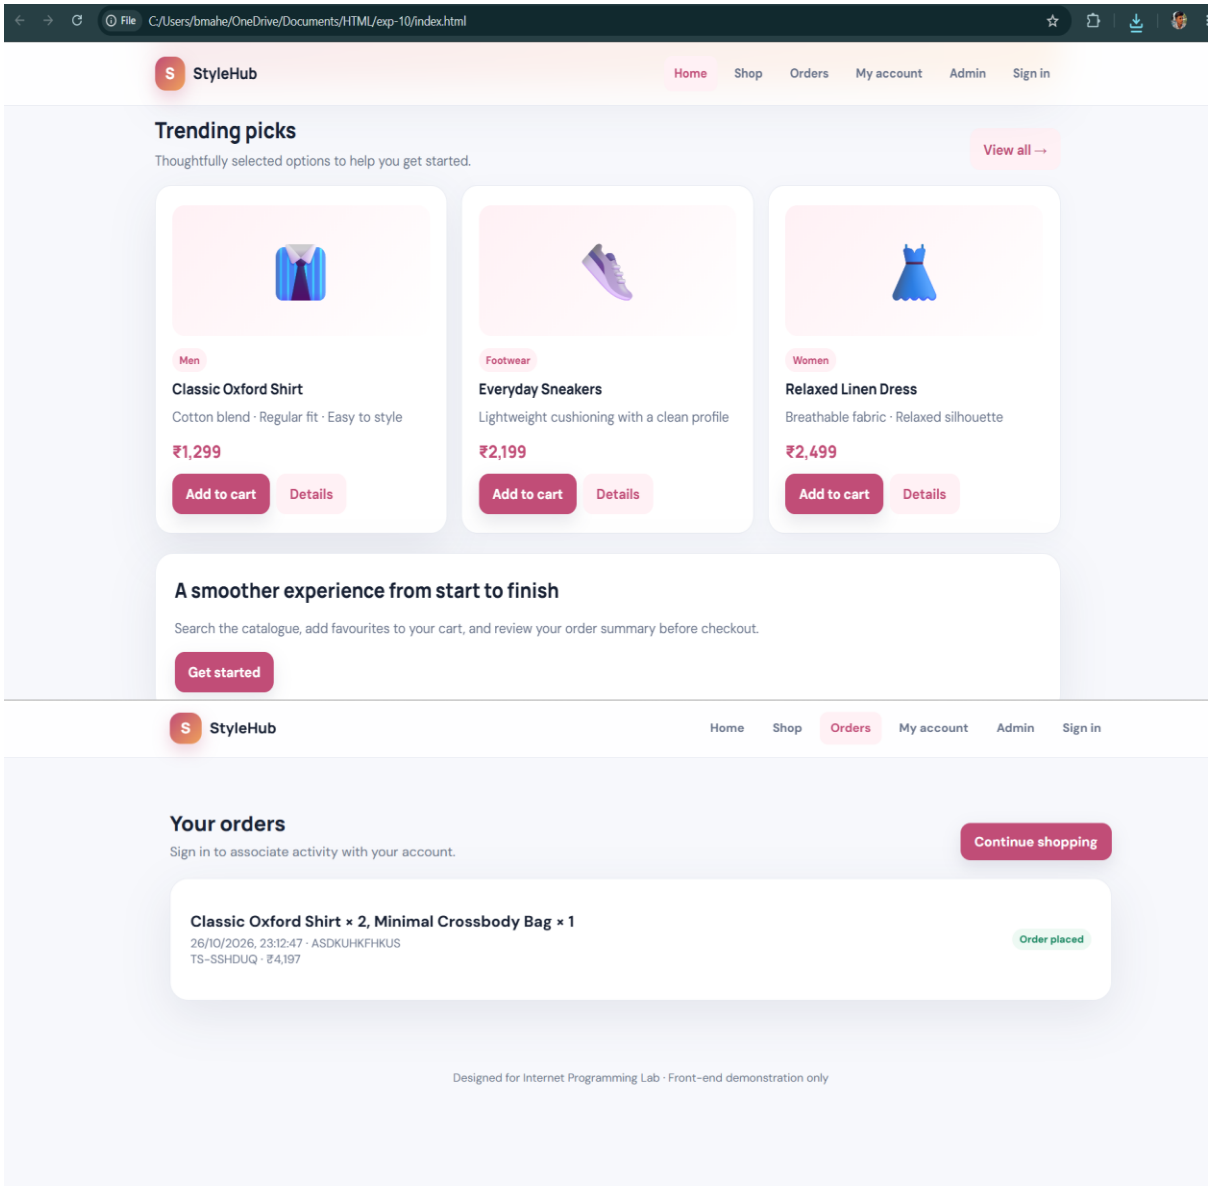

1. **Display fashion items with category and price.**
2. **Filter products by category.**
3. **Allow adding items to the cart.**
4. **Update the cart total.**
5. **Display a simple result.**

Program Code

```
<!DOCTYPE html>
<html><head><title>StyleHub</title><style>body{font-family:Arial;background:#fff4e6;padding:25px}main{max-
width:700px;margin:auto;background:white;padding:22px;border-
radius:12px}button,select{padding:10px;margin:7px}button{background:#d9480f;color:white;border:0}.item{paddin
g:10px;border-bottom:1px solid #ddd}</style></head><body><main>
<h1>StyleHub Fashion</h1><select id="cat"
onchange="render()"><option>All</option><option>Clothing</option><option>Footwear</option><option>Accessories
</option></select><div id="list"></div><h3 id="total">Cart total: ₹0</h3>
<script>let items=[{n:'T-
Shirt',c:'Clothing',p:599},{n:'Jeans',c:'Clothing',p:1299},{n:'Sneakers',c:'Footwear',p:1999},{n:'Watch',c:'A
ccessories',p:999}],sum=0;
function render(){let c=cat.value;list.innerHTML=items.filter(x=>c==='All'||x.c===c).map(x=>`<div
class="item">${x.n} (${x.c}) — ₹${x.p} <button onclick="add(${x.p})">Add</button></div>`).join('');}
function add(p){sum+=p;total.textContent='Cart total: ₹'+sum;}render();</script>
</main></body></html>
```

Result

The page filters clothing, footwear and accessories and updates the cart total. User accounts, orders and payments require a backend.
