Experiment 4: Train Reservation System

Aim

To design a train reservation interface that accepts passenger, route, date and class details and generates a sample booking reference.

Algorithm

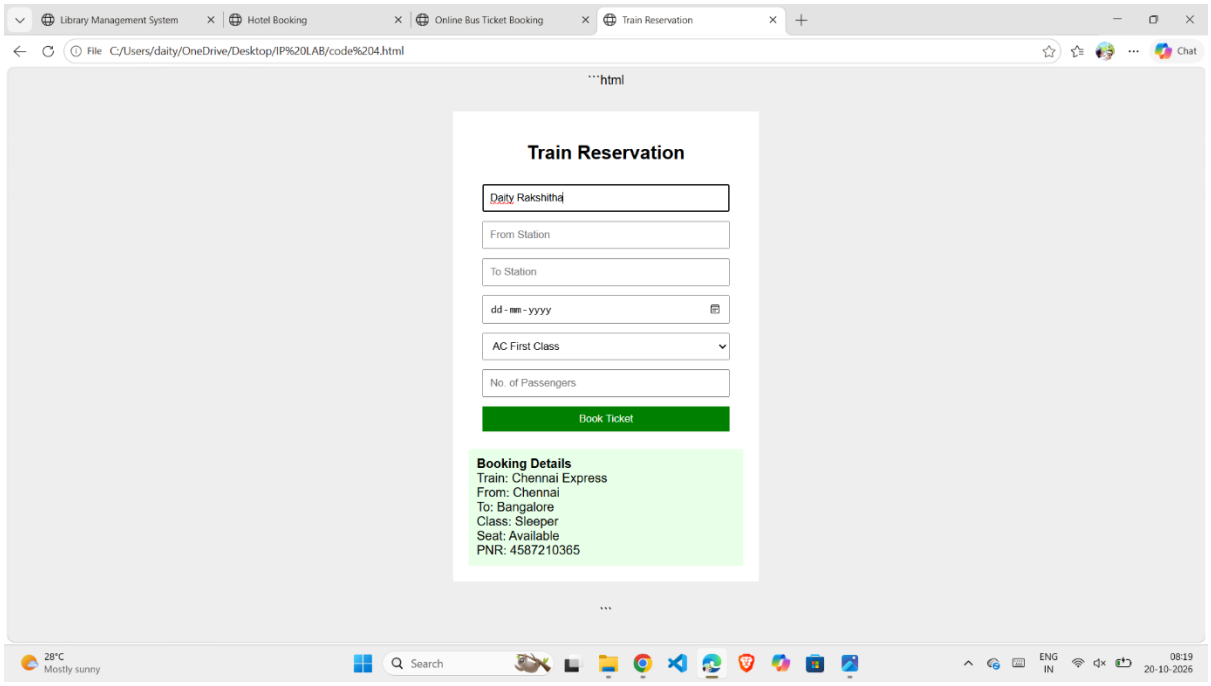

1. **Collect passenger and journey details.**
2. **Allow selection of train class.**
3. **Calculate sample fare based on class and passenger count.**
4. **Validate all required fields.**
5. **Display a sample PNR/reference number.**

Program Code

```
<!DOCTYPE html>
<html><head><title>Train Reservation</title><style>body{font-
family:Arial;background:#edf1ff;padding:25px}main{max-
width:650px;margin:auto;background:white;padding:22px;border-
radius:12px}input,select,button{padding:10px;margin:7px}button{background:#3548a5;color:white;border:0}</styl
e></head><body><main>
<h1>RailConnect</h1><input id="p" placeholder="Passenger name"><input id="from" placeholder="From
station"><input id="to" placeholder="To station"><input type="date" id="journey">
<select id="cls"><option value="300">Sleeper ₹300</option><option value="700">AC 3 Tier ₹700</option><option
value="1200">AC 2 Tier ₹1200</option></select><input type="number" id="count" value="1" min="1"><button
onclick="reserve()">Reserve</button><p id="out"></p>
<script>function reserve(){let
n=Number(count.value);out.textContent=p.value&&from.value&&to.value&&journey.value&&from.value!==to.value&&n>
0?'Demo reference: DEMO'+Math.floor(100000+Math.random()*900000)+' | Estimated fare
₹'+(n*Number(cls.value)):'Enter valid journey details.';}</script>
</main></body></html>
```

Result

The interface validates the journey details and generates a demo reference with an estimated fare. It does not connect to railway systems or issue a real ticket.
