Experiment 7: Beauty Parlour Appointment System

Aim

To create a salon appointment form where customers select a service, stylist and preferred date/time.

Algorithm

1. **Show available salon services and indicative prices.**
2. **Collect customer name, service, stylist, date and time.**
3. **Validate appointment details.**
4. **Display appointment summary.**
5. **In a real system, block already-booked slots in the database.**

Program Code

```
<!DOCTYPE html>
<html><head><title>Salon Booking</title><style>body{font-
family:Arial;background:#fff0f0;padding:25px}main{max-
width:620px;margin:auto;background:white;padding:22px;border-
radius:12px}input,select,button{padding:10px;margin:7px}button{background:#b83280;color:white;border:0}</styl
e></head><body><main>
<h1>Glow Beauty Studio</h1><input id="name" placeholder="Your name"><select id="service"><option>Haircut -
₹300</option><option>Facial - ₹800</option><option>Manicure - ₹400</option></select><select
id="stylist"><option>Anu</option><option>Priya</option></select><input id="date" type="date"><input id="time"
type="time"><button onclick="book()">Book Appointment</button><p id="out"></p>
<script>function book(){out.textContent=name.value&&date.value&&time.value?'Appointment request received for
'+name.value+' with '+stylist.value+' on '+date.value+' at '+time.value+' ('+service.value+').':'Please
complete all fields.';}</script>
</main></body></html>
```

Result

The form shows an appointment request summary after validation. Real-time slot locking, reminders and online payment need server integration.
