Experiment 8: Hospital Appointment Booking System

Aim

To provide a simple patient interface to select a doctor specialty and request an appointment.

Algorithm

1. **Display doctor specialties.**
2. **Collect patient name, specialty, date and time.**
3. **Validate the fields.**
4. **Display the appointment request.**
5. **A production system must protect medical data and use secure authentication.**

Program Code

```
<!DOCTYPE html>
<html><head><title>Hospital Appointment</title><style>body{font-
family:Arial;background:#e8fff9;padding:25px}main{max-
width:620px;margin:auto;background:white;padding:22px;border-
radius:12px}input,select,button{padding:10px;margin:7px}button{background:#087f8c;color:white;border:0}</styl
e></head><body><main>
<h1>MedCare Hospital</h1><input id="p" placeholder="Patient name"><select id="doc"><option>General
Physician</option><option>Cardiologist</option><option>Dermatologist</option><option>Pediatrician</option></s
elect><input id="date" type="date"><input id="time" type="time"><button onclick="book()">Request
Appointment</button><p id="out"></p>
<script>function book(){out.textContent=p.value&&date.value&&time.value?'Appointment request for '+p.value+'
with '+doc.value+' on '+date.value+' at '+time.value+'.':'Please fill all fields.';}</script>
</main></body></html>
```

Result

The page accepts patient appointment details and displays a request summary. It is a demonstration only and is not connected to hospital records.
